

waste or hazardous chemicals will be produced by this operation.

- E. After the rig is moved out and the well is either completed or abandoned, all waste materials will be cleaned up within 30 days. No adverse materials will be left on the location. The reserve pit will be completely fenced and kept closed until it has dried. When the reserve pit is dry enough to breakout and fill and as weather permits, the unused portion of the well site will be leveled as required per BLM specifications. Only that part of the pad required for production facilities will be kept in use.

6. Ancillary Facilities:

No airstrip, campsite, or other facilities will be built as a result of the operations on this well.

7. Well Site Layout:

- A. The drill pad layout, with elevations staked by John West Engineering, is shown in Exhibit #6.
- B. Exhibit #6 shows the planned orientation for the rig and associated drilling equipment, reserve pit, trash trailer, pipe racks, turn around, and parking areas, and access road. No permanent living facilities are planned.

8. Plans for Restoration of the Surface:

- A. Upon completion of the proposed operations, if the well is to be abandoned, the caliche will be ripped on the location and road and a berm will be pushed up at road entrance, to prevent travel. All trash, garbage, will be hauled away in order to leave the location in an aesthetically pleasing condition. Pit area will be returned to as near original contour as possible.
