RE: BURTON FLATS DEEP UNIT #41
Eddy County, New Mexico

Gentlemen:

Enclosed for your files are the completion report, bottom hole pressure build-up report and 4-point test results for the subject well. The well is completed in the Atoka and tested at an absolute open flow capacity of 1.2 MMCFPD. We believe that the well is initially capable of about 600-800 MCFPD. Currently the well is shut in and scheduled for pipeline connection in about one week. Production equipment has been moved from the BFDU #8 (SI) and installation is about completed. The pressure build-up data indicates some formation damage and we will consider a stimulation treatment after observing production into the pipeline.

If you have any questions, please call me at (303) 573-5100.

Sincerely,

GENERAL ATLANTIC RESOURCES, INC.

Bob Mowry
Senior Operations Engineer
