

- B) The disturbed area will be revegetated by reseeding during the proper growing season with a seed mixture of native grass as recommended by the BLM.
- C) Upon completion of the proposed operations, if the well is completed, the reserve pit area will be treated as outlined above within the same prescribed time. The caliche from any area of the original drillsite not needed for production operations or facilities will be removed and used for construction of thicker pads or firewalls for the tank battery installation. Any additional caliche required for facilities will be obtained from a BLM approved caliche pit. Topsoil removed from the drill site will be used to recontour the pit area and any unused portions of the drill pad to the original natural level and reseeded as per BLM specifications.

10. Surface Ownership:

The wellsite is located entirely on Private surface.

11. Other Information:

- A) The area around the well site is grassland and the top soil is sandy. The vegetation is native scrub grasses with abundant oakbrush, sagebrush, yucca, and prickly pear.
- B) There is no permanent or live water in the immediate area.
- C) A Cultural Resource Examination has been made and is within the drilling program.
