The elevation of the ~~surface~~ ^{ground level} above sea level is Elevation will be reported later. ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill a well at the above location with rotary tools to an approximate total depth of 2400' to test the producing capabilities of the Rio del Mar formation. 1300' of 8 1/2" 20 surface casing will be set and cemented to surface. Should the well prove productive, a 1 1/2" 20 casing will be set to 2,000' and cemented with a sufficient quantity to provide at least 500' of fill-up behind the pipe or to bring cement above all oil or water bearing strata. A "Special Use Application" is being filed with the U. S. Forest Service in Santa Fe, New Mexico.

I understand that this plan of work must receive approval in writing by the Geological Survey before operation may be commenced.
