Detailed account of work done, nature and quantity of materials used, and results obtained.							
<p>Test was drilled to depth of 2455 feet, in Delaware Sand, On December 31, 1958. At this depth we had 10 to 12 barrels of salt water per hour. Inasmuch as my dry hole letter with Union Oil Company stipulates that I notify them when excessive amounts of water are encountered in the Delaware Sand and give them an opportunity to run a Velocity Survey in the hole; at their own expense, I so notified them on December 31, 1958.</p> <p>Union Oil Company gave me a negative decision several weeks later. We went back into the hole on January 18, 1959 and found salt water standing in the hole at a level 35 feet from surface. We drilled hole deeper from 2455' to 2470' and shut down temporarily to reach decision on further drilling.</p>
