Marked _____ July 7, 1958

Well No. 1 is located 660 ft. from N line and 510 ft. from W line of sec. 1

Section 1 23 South 23 East N.M.P.M.
($\frac{1}{4}$ Sec. and Sec. No.) (Twp.) (Range) (Meridian)

Illust. Elm New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill this test to a depth of 3100' in Delaware Sand; or to such lesser depth at which commercial production of oil and gas, or excessive water in the Delaware Sand may be encountered.

We propose to set a conductor string as needed to shut off surface water, then if commercial production is indicated we will set and cement approximately 3100' of 14 1/2 five and one-half inch casing. This string of casing will be cemented with a sufficient amount of cement to protect the salt section.

This test will be drilled by Murphy-Oyer Drilling Company, Inc. through a Designation of Operator from Mr. Neal Marks, the Lessee.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
