DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

This well will be drilled with rotary to a depth of approximately 7,000 feet. We will set 13 3/8" casing through the surface water and cement to the surface, at approximately 275 feet. We will set 8 5/8" casing on the top of the Delaware Lime at approximately 2710' and cement with 100 sacks. We will then drill to test the Delaware Formation and if production is indicated will run 5 1/2" casing to total depth and cement with approximately 800 sacks of cement and complete through perforations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
