The elevation of the derrick floor above sea level is **3292.4** ft. OR

## DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Pursuant to verbal permission, we plugged this well by setting a 50-sack plug from 3050' to 2890'. We then pulled 2219' of 8 5/8 casing and set a second plug from 432' back to 399' with 20 sacks. We then filled the hole and set 5 sacks from 20' back to the surface, and set a 4" marker at the surface. 398.12' of 13 3/8" casing was left in the hole and 768.90' of 8 5/8" casing left in the hole.

We cleaned the location and left the ground in its original condition.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
