 (1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Malaga Reddy New Mexico
 (Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 2991 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

RECEIVED
DEC 1 1958
U. S. GEOLOGICAL SURVEY
ARTESIA, NEW MEXICO

This well is to be drilled with rotary to the Delaware Sand at approximately 2700'. The casing program will be approximately 300' of 8 5/8" 24 lb. casing cemented with 30 sacks and allowed a setting time of 24 hrs. 5 1/2" casing will be set into the top of the Delaware Sand and cemented with 100 sacks and allowed a setting time of 48 hrs. All casing jobs will be tested and reported according to regulations. We plan to convert from rotary to cable tools after the setting of the 5 1/2" oil string and drill with cable tools into the pay section of the Delaware Sand.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
