17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)\*

Set 9 5/8" Baker Mercury series cast iron retainer prematurely at 254' from the surface. Pumped 300 sks regular neat cement followed by 369 bbls 9.6#/gas gel mud to place the cement in the casing perforations 6,112' to 6,118' plus fill the 9 5/8" OD casing to 5280'. Picked up out of retainer at 254' to prevent fluid movement. Plug down at 10:17 AM MST December 21, 1967. Reset in retainer at 254' and pressure tested cement plug below retainer to 1000# after waiting on cement twentyfour (24) hours. Held without loss. Pulled tubing to 130' and pumped 50 sks regular neat cement to spot plug from 130' back to surface.

Removed wellhead, installed regulation marker and cleaned location for final inspection.
