Attn: Mike Williams

Gentlemen:

Enclosed is C-107 with relevant data to update well records pertaining to the dual completion of our James A, Well No. 1 located 2006' FEL and 665' FSL of Section 2, T-22-S, R-30-E, Eddy County, New Mexico. The subject well was originally completed in the Morrow formation on November 30, 1966, the Strawn formation was perforated in January, 1967, and the Morrow zone was shut-in behind a packer. The well has been producing from the Morrow zone since the Strawn completion was shut-in during a workover in January, 1973. At present, Morrow production has declined and we are testing the Strawn formation with plans to produce the Strawn as a single completion shutting in the Morrow formation behind a packer.

All offset operators have been provided with a copy of this letter and attached data on this date. If any further information is needed, please contact me at the above address or telephone 915/367-1488.

Your very truly,

Larry M. Sanders
Regulation and Proration Supervisor
