RE: BOP Test - Your Pardue #1

Gentlemen:

We made a hydrostatic pressure test to captioned blowout control equipment on March 13, 1974, and wish to advise the following:

At the conclusion of testing:

Valve: Leak thru main inlet valve off choke-manifold cross - to be repaired or replaced as needed.

Choke: Leak thru choke off tee off choke-manifold cross - to be repaired or replaced as needed.

Items of the blowout control equipment from top of test plug landed in casing head up through Hydril were tested to 3200# with separate tests being made at the pressure of 5000# to blind rams, pipe rams, upper kelly cock, chokeline, choke-manifold, and to the valves and fittings of the bop stack proper.

There were no visible leak to items tested at the conclusion of testing other than as mentioned above.

No delay was observed to operation of blowout control equipment at the conclusion of testing. Closures were made using closing unit pump only to the observed pressure of
