11/84 - Texas American Oil (TAO) set a CIBP at 5950' with 10' of cement on top. They perfered 5166' - 5176' (22 holes) and acidized with 1000 gals 7½% NEFE HCl acid + 25 ball sealers. After the treatment, they swabbed water with no show of oil or gas. More perfs were added from 5086' - 5092' (14 holes). Another CIBP was set at 5150'. The well was then temporarily abandoned.

Devon Energy Corporation (Nevada) purchased this property from TAO in 1988. Upon reviewing the well file records, we were unable to find a Sundry Notice that reported the additional perforations. (The BLM did however receive and approve subsequent Sundry Notices in 1986 which requested permission to plug and abandon the property.)

We are submitting this Subsequent Report at this time to be sure we are in compliance with the Bureau of Land Management regulations per the recommendation of Shannon Shaw, BLM Carlsbad (engineering department).
