Gentlemen:

Enclosed are C-103's and a C-104 for the captioned well requesting authority to deliver gas to Llano, Inc. while the well is being tested pending treatment and actual potential test.

The C-103's report the two completion attempts in the Morrow formation which has now been abandoned, and the perforations for completion on the Canyon interval. The Canyon perforations are capable of gas and gas condensate production. We propose to test the Canyon perforations through a separator delivering the gas to Llano, Inc. and accumulating the condensate in a test tank. The gas delivered to Llano, Inc. will be credited to Union Oil of California's interest in the captioned well, since Union's interest is dedicated by contract to Llano.

The completion portion of the C-104 has not been completed since a completion test has not been taken. Temporary authority to deliver gas to Llano, Inc. and condensate to the Permian Corporation is requested during this testing period to prevent waste of these products. A complete C-104 will be filed following the potential test.

Your favorable consideration of our request will be appreciated.

Yours very truly,

MORRIS R. ANTWEIL
