Attention: Mr. W. A. Gressett

Gentlemen:

Enclosed is a one point back pressure test on the Merland C #1 gas well. The test was conducted on May 18, 1973 upon itial completion.

The well was connected to the pipeline on August 15, 1973. We had planned to run a multipoint back pressure test immediately after sales began, however, it was soon evident that the well would not produce at sustained rates to permit running the four point test.

The Morrow producing interval was treated with 3,000 gallons of hypochlorite solution on October 25, 1973. Prior to the job the well was flowing 670 MCFD and 1 BWPD at 700 psig FTP. As of November 4, 1973, the well was flowing 675 MCFD and 3 BWPD at 710 psig FTP. The well is flowing against a pipeline pressure of 680 psig.

If any additional information is desired, please advise us.

Sincerely yours,

E. Y. Wilder  
Region Operation Manager
