CARLSBAD CANYON/MORROW

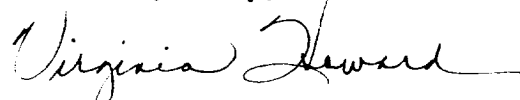

Gentlemen:

We have your letter of October 24, 1980, notifying us that you did not receive the annual Packer Leakage Test on the subject well.

This dual well was temporarily abandoned in the Morrow Zone in March, 1978. In March, 1980, the Canyon completion was temporarily abandoned due to insufficient bottom hole pressure. Mobil's plans at that time were to plug and abandon this well and approval to do this was granted by the USGS, Artesia, on October 1, 1979.

We have now been informed that those plans to P&A have been cancelled and that a proposal to recomplect to another zone is being prepared by our engineering department. In the meantime, both zones in the well remain temporarily abandoned.

Yours very truly,

Virginia Howard
Proration Group Supervisor
