

TESTING: Hydril with valve closed off casing spool and all valves closed next to stack.

Test #2 Pressured to 2500# with loss of pressure; repressured to 2500# with loss of approximately 100# during first sixteen minutes then leveling out for remaining one minute of test.

NO VISIBLE LEAK. PRESSURE LEVELING OUT TOWARDS APPROXIMATELY 2400#.

---

A delay was observed to operation of blowout control equipment at the conclusion of testing - union on closing line to Hydril leaked (repaired as needed). Closures were made using accumulators only to the observed pressure of 1200# for test to ram type bops and 1400# for test to Hydril. Accumulators were pressured to 1800# at end of test. Control valves operated as indicated on closing unit manifold at end of test. Bop extentions were not hooked up. No test desired to the upper kelly cock (not in rig inventory at time of test), nor to the lower kelly cock (not in rig inventory at time of test), or to the drill pipe safety valve (not in rig inventory at time of test). Body test only to blind rams.
