

TESTING:     Hydril with all inside valves closed next to stack.

Test #2     Pressured to 2500# with loss of pressure; repressured to 3000#  
              with slight loss of pressure; repressured to 3000# with loss  
              or approximately 100# during first fourteen minutes then leveling  
              out for remaining one minute of test.  
              NO VISIBLE LEAK. PRESSURE LEVELING OUT TOWARDS APPROXIMATELY 2900#.

---

No delay was observed to operation of blowout control equipment at the conclusion of testing. Closures were made using closing unit pump only to the observed pressure of 1200# for test to ram type bops and 2000# for test to Hydril. Accumulators were pressured to 1500# at end of test. Control valves operated as indicated on closing unit manifold at end of test. Bop extentions were not hooked up - rig nippling up. No test desired to top of casing using packer, nor to the lower kelly cock, or to the drill pipe safety valve.
