

- 11.) Plans for Restoration of the Surface: After drilling the well, Texas American will level all pits and location as near to original ground level as possible. This location is in an arid, sandy region on which there is very little surface grass.
- 12.) Detailed Mud Program: 0' - 600' Fresh Water Spud Mud.
600' - 6200' Brine water with lime and loss circulation material as needed.
- 13.) Blow Out Preventer: See attached Exhibit "C" for detail.

Yours very truly,

N. T. Emanuel
