

9. WELLSITE LAYOUT

- A. Exhibit C shows the relative location and dimensions of the well pad, etc.
- B. The location surface is slightly sloping.
- C. No new reserve pits will be constructed or used.
- D. A 400' X 400' area has been previously staked and flagged.

10. PLANS FOR RESTORATION OF THE SURFACE

- A. After finishing drilling and/or completion operations, all equipment and other material not needed for further operations will be removed. The location will be cleaned of all trash and junk to leave the wellsite in as aesthetically pleasing a condition as possible.
- B. Unguarded pits, if any containing fluids will be fenced until they have dried and are leveled.
- C. If the proposed well is non-productive, all rehabilitation and/or vegetation requirements of the state will be complied with and will be accomplished as expeditiously as possible.. All pits will be filled level within 90 days after abandonment of the operations.

11. OTHER INFORMATION

- A. Topography: The land surface in the vicinity of the wellsite is alluvium and rock. The immediate area of the wellsite is discussed above in paragraph 9B.
- B. Flora and Fauna: The vegetative cover on the wellsite consists of mesquite, saltbrush, sand sage, shinny oak and miscellaneous desert growth. No wildlife was observed but the wildlife in the area probably includes those typical of semi-arid desert land. The area is used primarily for cattle grazing.
- C. Waterways: The location is adjacent to the Black River, KGS.
- D. There are no inhabited dwellings in the vicinity for miles.
- E. Surface Ownership: The well is on federal surface and federal minerals. The grazer is being notified of our intentions to drill by letter.
