

10. PLANS FOR RESTORATION OF THE SURFACE:

- A. After completion of drilling and/or completion operations, all equipment and other material not needed for operations will be removed. Pits will be filled and the location cleaned of all trash and junk to leave the well site in an aesthetically pleasing a condition as possible.
- B. Any unguarded pits containing fluids will be fenced and screened until they are filled.
- C. If the proposed well is non-productive, all rehabilitation and/or vegetation requirements of the Bureau of Land Management will be complied with and will be accomplished as expeditiously as possible. All pits will be filled and leveled as soon as they are sufficiently dried.

11. OTHER INFORMATION:

- A. Topography: The well site and access road are in the upland plains located in the Frontier Hills west of the Pecos River and east of the Guadalupe mountains. The location is approximately 400 feet west of U.S. Highway 62/180 and 700 feet north of Elbow Canyon. There is a 2% slope toward the Elbow Canyon on the south with an overall 1.4% slope to the northeast from a 3435.2' GL elevation.
- B. Soil: The topsoil at the well site is a moderately light colored calcareous, gravelly soil of the Upton gravelly loam in the Upton Soils Series. There is about a foot of gravelly surface soil on top of a layer of hard fractured caliche.
- C. Flora and Fauna: The vegetation cover on the existing location is a sparse grass cover of three-awn, dropseed, and other misc. native grasses along with plants of mesquite, yucca, broomweed, creosote bush, sage, cacti and miscellaneous weeds and wildflowers. The wildlife consists of rabbits, coyotes, rattlesnakes, lizards, dove, quail and other wildlife typical of the semi-arid desert land.
- D. Ponds and Streams: There are intermittent drainage streams 700' south, the Elbow Canyon and 4000' south, the Threemile Draw.
- E. Residences and Other Structures: None in the area.
- F. Land Use: Cattle grazing.
- G. Surface Ownership: The proposed well site and access road is on Federal surface and minerals.
- H. There is no evidence of any archaeological, historical or cultural sites in the area. An archaeological survey will not be conducted since there will be no new surface disturbance and all drilling activities will be confined to the existing pad and access road.
