Attn: Mr. W. A. Gresset

Dear Sir:

The required Multi Point Back Pressure Test for the subject gas well was performed May 22, 1979. As you are aware, only one point was measured. The remaining points could not be obtained due to a frozen choke caused by water production during the test. Since only one data point was recorded, a 45° extrapolation (n=1) of the point was used to calculate the absolute open flow.

High water production remains a problem for this well. Currently it is making approximately 175 MCFGPD and 100 BWPD. The well is marginally economical to produce at these rates and is being evaluated for remedial work.
