At 1 BPM rate, pressure increased from 800 psi to 975 psi after total of 15 bbls (internal yield on 13-3/8" 48# H-40 is 1730 psi). Unable to bradenhead squeeze. Obtained clearance from U.S.G.S. personnel (Gordon/Knauf) to resume operations and complete cementing after running liner. Nippled up BOP's and tested casing to 1500 psi 46-3/4 hrs after cementing operations completed. Drilled DV tool at 6475'; 40' of cement on top of float collar, collar and 77' of cement. Tested casing to 1500 psi - 30 min - OK. Resumed drilling 8½" hole on June 23, 1976.
