Re: South Culebra Bluff Unit  
#4-A-23-23-28  
Eddy County, New Mexico

Attention: Mr. W. A. Gressett

Gentlemen:

Enclosed is the amended copy of Form C-103 with additional cement information. After setting and cementing this liner, the pulling of the 2-7/8" work string indicated cement approximately 150' (5 joints) above the liner top. We did not reverse out excess cement. On 4/5/80 we rigged up JARREL wireline services and went in with a wireline bailer and hit cement at 4762'. We recovered a small sample of unset, watery cement.

The cement will not be drilled out for approximately two more weeks, and a casing test will be conducted at that time. Results of the casing test will be reported on Form C-103 as soon as available.

Very truly yours,

Ron Lechwar  
Project Manager  
Delta Drilling Company
