H, Sec. 13, T-23-S, R-27-E
Eddy County, New Mexico

Dear Sir:

It is respectfully requested that an exception to Rule 107 (d) be allowed for the subject well.

At the present time, the 2 7/8" tubing is landed in the 4 1/2" liner top at 10,510' and the uppermost perforation is at 12,388'. The downhole equipment consists of a BOT seal mandrel (w/4 sets of seals), a 15' long blast joint and a mule shoe guide bottom.

This configuration was considered the most practical because of the unknown nature of the intervals to be tested in this wildcat well.

Yours truly,

Frank P. DeMasi
Project Drilling Engr.
