

**1. EXISTING ROADS:**

- A. Exhibit "A" is a portion of a highway map showing southeast New Mexico. The proposed well is approximately 10 miles southeast of Carlsbad, New Mexico. A red circle drawn encompasses the proposed site.
- B. Exhibit "B" shows existing pertinent roads and surface topography in the vicinity of the proposed well site. To go to the site, go south from Carlsbad, New Mexico on U.S. 285. Near Loving, turn left on S.H. 31. Go east on S.H. 31 5.3 miles, turn left on County blacktop road (Refinery Rd.). Go northwest 3.4 miles on blacktop road, turn right onto pipeline dirt road. Continue northeast on dirt road 0.7 mile, left onto location.

**2. PLANNED ACCESS ROAD:**

- A. Existing roads will be used for access to the proposed site. A pipeline dirt road exists from the County blacktop road to the proposed well site. Since this well was plugged in 1987, the wellsite and its access road are still visible. All dirt work and well completion work will be contained on the old wellsite and access road and will not affect any other area. An archaeological clearance is therefore not required. Caliche will be needed to build-up the wellsite and dirt access road to provide adequate drainage. All travel into the well site will occur on dirt roads situated on Federal lands. See Exhibit B.

**3. LOCATION OF EXISTING WELLS:**

- A. Existing wells in the immediate area are shown on Exhibit "B".

**4. LOCATION OF EXISTING AND/OR PROPOSED FACILITIES:**

- A. Necessary production facilities for this well will be located on the well pad. Storage tanks will be isolated with an earthen firewall to prevent any loss of liquids off the pad.

**5. LOCATION AND TYPE OF WATER SUPPLY:**

- A. A water well will not be drilled. Water necessary for drilling operations will be purchased and trucked to the well site.
