Attn: William J. LeMay  
Director

Sir:

We respectfully request approval to intentionally deviate our Livingston Ridge No. 3, as provided in Statewide Rule 111. The current surface location of this well is 1450' FNL and 660' FWL, with an intended bottom hole location of 1980' FNL and 660' FWL at a depth of 7,700'. The unorthodox surface location was altered due to topographic conditions and archeological sites as determined from archeological surveys performed as required by the BLM. The intended bottom hole location is an orthodox location.

Attached is a plat showing surface location and targeted bottom hole location. Also attached is a topographic map illustrating the surface obstructions. Not indicated on the map are the abundant archeological sites which have designated other possible drill sites as unacceptable.

This directional well shall be tested at least once each 500 feet or at the first bit change succeeding 500 feet. A tabulation of all deviation tests run, sworn to and notarized, shall be filed with Form C-104.

All offset operators, indicated on the attached, have been notified of this application by certified mail. Your consideration and approval will be appreciated. Please direct any questions to the attention of Mike Decker, telephone (915) 368-1557.

Sincerely,

J. E. Pickett  
Supervisor,  
Reservoir Engineering
