

- E. Trash will be deposited in a metal container and hauled to an approved disposal site.
 - F. Within 30 days following drilling and/or completion operations, trash and debris will be hauled to an approved disposal site.
8. Ancillary Facilities
None
9. Wellsite Layout
- A. Plat #8 shows the dimensions of the well pad. As mentioned in Section 7, no reserve pits will be used. Location of the major rig components, and well pad orientation are shown. It is currently planned to use Grace Drilling Co. Rig # 403, this could change however depending on availability.
 - B. Topography of the area is relatively level with 6 to 10' sand dunes across the entire location. Fills should be no more than 3' deep. The location will be capped with 4 to 6" of caliche.
 - C. No reserve pit will be used however the pit used for the drill cutting at the Amoco Fed. #1 will be lined with plastic.
 - D. No Diversion ditches are planned.
 - E. The pad has been stacked and flagged for the archeological study.
10. Plans for restoration of the Surface.
- A. Upon completion of drilling, completion and production operations the area disturbed by the project will be restored to BLM specifications or to as near their former natural condition as possible.
 - B. All of the caliche material will be removed and the area will be leveled to pre-project grade.
 - C. No drainage systems will be needed on the site.
 - D. No segregation of spoils is planned at this time as it is a blow sand area.
 - E. Waste disposal was out lined in section 7.
 - F. Revegetation and fertilization will be as per BLM stipulations.
