10-27-91

This Sundry Notice is to report drilling into a shallow high pressure zone @ 1353' causing an immediate "blow out". The blow out was controlled by closing blow out preventers and relieving abnormal high pressure through choke lines going to the pit area. The velocity of pressure forced all of the 10.0 PPg drilling fluid from the well bore. After 13 3/4 hrs. drilling operations were normal while drilling with 10 PPg fluid and using a rotating head to control the influx of small air pockets.

14. I hereby certify that the foregoing is true and correct.
