13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

Pogo Producing Company respectfully request permission to abandon the Atoka perms 12,736' to 12,748'. These perms proved to be tight & wet. We propose that a plug be set at approximately 12,730' and be capped w/ minimum of 35' cmt. A 7" CIBP will be set at the top of the 5" liner 10,240'. A 200' cmt plug will be spotted above it. A Bone Spring completion attempt will be made @ 8064'-8100' & 8782'-9032'. Attached is a current well tubing packer schematic and a plugback procedure.
