

- H. Gates and Cattleguards: A 30 ft cattleguard will be installed in the fence line where the driveway leaves the highways as shown on the State driveway application plat (Exhibit K).
- I. Right of Way: All access to the location is over Federal lands. No additional ROW should be required.
3. Location of Existing Wells
- Existing wells are shown on Exhibit 'I'.
4. Location of Existing and/or Proposed Facilities
- If the well is productive, production, storage, and measurement facilities will be constructed on the wellpad.
5. Location and Type of Water Supply
- Plans are to obtain water for drilling operations from a well located about 1 ½ miles SW of the location. The water will be transported by fast line. Brine will be obtained from and transported by commercial suppliers and haulers.
6. Source of Construction Materials
- Plans call for use of material-in-place for construction. If caliche is necessary for road or pad surfacing, it would be obtained from the reserve pit. No caliche or other material will be taken from Public Land without prior approval.
7. Methods of Handling Waste Disposal
- A. Drill cuttings will be disposed of in the drilling pits.
- B. Drilling fluids will be allowed to evaporate in the drilling pits until the pits are dry.
- C. Water produced during testing will be stored in tanks and trucked to an approved disposal facility. Oil produced during testing will be stored in test tanks until sold.
- D. The operator will comply with current laws and regulations pertaining to the disposal of human waste.
- E. Trash, waste paper, garbage, and junk will be stored in a trash trailer and will be contained to prevent scattering by the wind.
- F. All trash and debris will be removed from the wellsite within 30 days after completing drilling, completion, and construction operations and disposal will be in an approved trash disposal facility.
8. Ancillary Facilities
- None are necessary.
