Well No. #3 is located 330 ft. from N line and 330 ft. from E line of sec. 1NW 1/4 Sec. 1 26S 24E N.M.P.M.
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)Wildcat
(Field)Eddy
(County or Subdivision)New Mexico
(State or Territory)The elevation of the derrick floor above sea level is 3730 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

10" hole was drilled with cable tools to about 80' where 8-5/8-28# casing was run. 8" hole was drilled with cable tools to 709' where 5 1/2"-14# casing was run and cemented with 8 sax. Water was encountered at 656' and stood at 52' from surface. This cement job and another using 8 sax cement failed to shut off water - pipe still free. Service company then pumped in 18 sax which effected water shut off. Bailed hole down and drilled 5" hole to 711' where more water was encountered with static head 29' below collar - drilled to 718' with cable tools and moved rig off. Moved on rotary and cored (2 1/2" core) to 889'. Plugged hole to 718' with 12 sax cement and shot 5 1/2" casing at 650', 620, 600 and 560'. Recovered 560'. Hole was left as water well at request of A. M. Leeman. Recovered all 8-5/8 casing. Final Report.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
