(INDICATE ABOVE BY CHECK MARK NATURE OF REPORT, NOTICE, OR OTHER DATA)

Sept. 22, 19 55

Well No. 1-23 Smith is located 800 ft. from N line and 800 ft. from W line of sec. 23

NW 1/4 Sec. 23 T. 26 S. R. 24 E N.M.P.M.
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)

Wildcat (Field) Eddy (County or Subdivision) New Mexico (State or Territory)

The elevation of the derrick floor above sea level is 3869 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is planned to drill a 10" cable tool hole to a depth of approximately 75', at which point 75' of 8-5/8" casing will be set as a conductor string. 8" hole will then be drilled to test the top of the Delaware Sand, expected to be approximately 900-1000'. If well is dry it will be plugged in conformance with USGS regulations. If oil is found 7" or 5 1/2" casing will be cemented on top of the pay as a production string.

The reason for the unorthodox location, is that a location 660' from north and west lines would lie directly atop the American Telephone and Telegraph coaxial cable.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
