Notes: Report results of all tests conducted on well. Completion or Abandonment Report and Log.

*If well is directionally drilled, give successive locations and azimuths and true vertical depths for all markers and points of interest.

A eleven inch hole was drilled to 780' which was approximately 230' into the Delaware Formation and 8-5/8" 24#/ft. casing was run to total depth. This surface casing string was cemented with 325 sacks cement and an estimated 50 sacks circulated. After WOC 24 hours the double ram blow-out preventor and Hydril Blow-out preventors were nuppled up, the casing was tested to 1000 psi and held O.K. A 7-7/8" hole was drilled to a total depth of 7030 feet and 5-1/2" casing of 14#/ft and 13.5#/ft. was run to total depth and cemented with 300 sacks Class C cement with 8# salt per sack and 3/4 of 1% CFR2. The production string was tested to 3000 psi and held O.K. Completion attempt will be made in the Morrow Sand.
