

7. The auxiliary equipment to be used, such as (1) kelly cocks, (2) floats at the bit, (3) monitoring equipment on the mud system, (4) a sub on the floor with a full opening valve to be stabbed into drill pipe when the kelly is not in the string.

We do not believe there will be a need for a float at the bit on this
on this unit.

8. The testing, logging, mud, and coring programs to be followed with provision made for required flexibility. (See attached sheet)
9. Any anticipated abnormal pressures or temperatures expected to be encountered or potential hazards such as hydrogen sulfide gas, along with plans for mitigating such hazards.

No abnormal pressures, temperatures, or hazardous gas are expected
to be encountered; however, prudent drilling operations will be
exercised to guard against such hazards.

10. The anticipated starting date and duration of the operations.

Starting Date: November 20, 1978 Duration of Operations 31 Days.
