RE: 4-Point backpressure test
Salt Draw 11 Federal Com. Well No. 1
Section 11, T-25S, R-28E
Eddy, County, New Mexico

Gentlemen:

On November 11, 1982 the above mentioned well was placed on sales line with a tubing pressure of 3375 psig and 650 MCFPD. As of November 16, 1982 the tubing pressure has fallen to 2400 psig and 111 MCFPD. This well has not been 4-pointed and we are requesting that the backpressure test be waived for this well. The test could never be achieved due to the inability to stabilize and its marginal gas production.

If there is any additional required information please contact the Hobbs Area Office.
