APPLICATION FOR CLASSIFICATION AS HARDSHIP GAS WELL

Operator Fuller Petroleum, Inc. Contact Party J. W. Ward  
2020 Texas American Bank Bldg.  
Address Ft. Worth, Texas 76102 Phone No. (817) 336-2020  
Lease Brushy Draw Well No. 1 UT C Sec. 24 TWP 26S RGE 29E  
Deep Federal

Pool Name Brushy Draw Wolfcamp Gas Minimum Rate Requested 313 Mcf/day

Transporter Name El Paso Natural Gas Purchaser (if different) \_\_\_\_\_

Are you seeking emergency "hardship" classification for this well? XXX yes        no

Applicant must provide the following information to support his contention that the subject well qualifies as a hardship gas well. SEE ATTACHED SHEETS

- 1) Provide a statement of the problem that leads the applicant to believe that "underground waste" will occur if the subject well is shut-in or is curtailed below its ability to produce. (The definition of underground waste is shown on the reverse side of this form)
- 2) Document that you as applicant have done all you reasonably and economically can do to eliminate or prevent the problem(s) leading to this application.
  - a) Well history. Explain fully all attempts made to rectify the problem. If no attempts have been made, explain reasons for failure to do so.
  - b) Mechanical condition of the well (provide wellbore sketch). Explain fully mechanical attempts to rectify the problem, including but not limited to:
    - i) the use of "smallbore" tubing; ii) other de-watering devices, such as plunger lift, rod pumping units, etc.
- 3) Present historical data which demonstrates conditions that can lead to waste. Such data should include:
  - a) Permanent loss of productivity after shut-in periods (i.e., formation damage).
  - b) Frequency of swabbing required after the well is shut-in or curtailed.
  - c) Length of time swabbing is required to return well to production after being shut-in.
  - d) Actual cost figures showing inability to continue operations without special relief
- 4) If failure to obtain a hardship gas well classification would result in premature abandonment, calculate the quantity of gas reserves which would be lost
- 5) Show the minimum sustainable producing rate of the subject well. This rate can be determined by:
  - a) Minimum flow or "log off" test; and/or
  - b) Documentation of well production history (producing rates and pressures, as well as gas/water ratio, both before and after shut-in periods due to the well dying, and other appropriate production data).
- 6) Attach a plat and/or map showing the proration unit dedicated to the well and the ownership of all offsetting acreage.
- 7) Submit any other appropriate data which will support the need for a hardship classification.
- 8) If the well is in a prorated pool, please show its current under- or over-produced status.
- 9) Attach a signed statement certifying that all information submitted with this application is true and correct to the best of your knowledge; that one copy of the application has been submitted to the appropriate Division district office (give the name) and that notice of the application has been given to the transporter/purchaser and all offset operators.

- 1) Definition of Underground Waste.
- 2) General Information Applicable to Hardship Gas Well Classification
- 3) The only acceptable basis for obtaining a "hardship" classification is prevention of waste which the burden of proof solely on the applicant. The applicant must not only prove waste which occurs without manner to minimize or eliminate the problem prior to requesting this special consideration, but also that he has accepted responsibility for the minimum sustainable rate at which the well will flow. If data from historical production is insufficient to support this rate (in the opinion of the Director), or if an offset operator or purchaser objects to the request for minimum flow ("log off"), test may be required. The operator may, if he desires, conduct a minimum flow test, and submit this information with his application. If a minimum flow test is to be run, either at the operator's option or at the request of the Division, the offset operator, any protesting party, the purchaser and OCD will be notified of the date of the test and given the opportunity to witness, if they so desire.
- 4) Any interested party may review the data submitted at either the Santa Fe office or OCD District Office.
- 5) The Director may review the data submitted at either the Santa Fe office or the appropriate OCD District Office.
- 6) The Director can approve uncontested applications administratively if, in his opinion, sufficient justification exists for suspending, reducing or eliminating the application of the rules and regulations of the Division. The Director may, if he desires, conduct a minimum flow test, and submit this information with his application. If a minimum flow test is to be run, either at the operator's option or at the request of the Division, the offset operator, any protesting party, the purchaser and OCD will be notified of the date of the test and given the opportunity to witness, if they so desire.
- 7) Should a protest be filed in writing, the applicant will be permitted to either withdraw the application, or request it to be set for hearing.
- 8) An emergency approval, on a temporary basis for a period not to exceed 90 days, may be granted by the District Supervisor, pending filing of formal application and final action of the OCD Director. This temporary approval may be granted only if the District Supervisor is convinced waste will occur without immediate relief. If granted, the District Supervisor is entitled to a period of one year unless rescinded sooner, by the Division. The application will be retained for a period of one year unless rescinded sooner, by the Division, in order to continue to receive a well receives a "hardship" classification, it will be retained for a period of one year unless rescinded sooner, by the Division, in order to continue to receive a well receives a "hardship" classification.
- 9) Nothing here withstands a "hardship" classification, it will be retained for a period of one year unless rescinded sooner, by the Division, in order to continue to receive a well receives a "hardship" classification.
- 10) Nothing here withstands a "hardship" classification, the Division may, on its own motion, require any and all operators to show cause why approval(s) should not be rescinded if abuse is suspected or market conditions substantially change in the state of New Mexico.
- 11) A well classified as a "hardship well", will continue to accumulate over and under the well can be allowed to produce at the higher rate. The well before or after being classified "hardship" must, however, be balanced before would be treated as any other non-hardship well. Any cumulative overproduction accrued would be produced to produce at the higher rate, if capable of doing so, and the well will be permitted to exceed the hardship rate, if capable of doing so, and under production (produced pools). Shouldallowable allowed assigned.
