

F) Cleanup of Well Site

Well pad is existing. The reserve pit will be fenced and the fence maintained until the pit is backfilled. Reasonable cleanup will be performed prior to the final restoration of the site.

**POINT 8: ANCILLARY FACILITIES**

None.

**POINT 9: WELL SITE LAYOUT**

A) Rig Orientation and Layout

Exhibit "C" shows the dimensions of the well pad and working pit, and the location of major rig components.

B) Locations of Pits and Access Road

See Exhibit "C".

C) Lining of the Pits

The workover pit will be lined with plastic.

**POINT 10: PLANS FOR RESTORATION OF THE SURFACE**

A) Reserve Pit Cleanup

The workover pit will be fenced immediately after construction and lining. Pit will be backfilled with soil excavated from the site and soil adjacent to the pit. The restored surface of the pit shall be contoured to prevent impoundment of surface water. The disturbed area will be seeded according to the Bureau of Land Management stipulations during the appropriate season following restoration.

B) Restoration Plans - Production Developed

Those areas not required for production will be graded to blend with the surrounding topography. Topsoil, as available, will be placed upon those areas and seeded. The portion of the site required for disposal will be graded to minimize erosion and provide access during inclement conditions. Following abandonment of the entire site, restoration procedures will be those that follow under Item C.
