13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

The intention here is to add another production sand to this well which is producing from now the Getty Sand from 5880' to 6030' (Brushy Canyon) Delaware Sand and the new sand will be from 5560' to 5600'. The plan is to set a temporary plug at about 5750'.

This sand is the lower Cherry Canyon and the sand from which is producing the #11 Ross Draw, (660' FSL & 1980' FEL of Section 22, T26S, R30E).

The # 18 Ross Draw is one-half mile south of the #11 which is a good producer in this Ross Draw field.

The new sand in the #18 will be washed with acid and fracked with 30,000 gallons and an appropriate sand.

The tempory plug above the Getty Sand will be removed and the two sand pays will be producing simultaneously
