#### **Additional Operator Remarks:**

Surface casing to be set -- 100' above the salt.

Producing casing cement will be brought up at least 500' above the upmost hydrocarbon bearing zone.

Drilling Procedure, BOPE Diagram, Anticipated Formation Tops and Surface Use Plans attached.

This well is located inside the R-111 Potash Area and inside the Secretary's Potash Order, but in the barren area for potash.

There are no potash leases within 1 mile of this location.

## EIGHT POINT DRILLING PROGRAM BASS ENTERPRISES PRODUCTION CO.

NAME OF WELL: Poker Lake Unit #183

LEGAL DESCRIPTION - SURFACE: 330' FNL & 1980' FWL, Section 7, T-24-S, R-30-E, Eddy County, New Mexico.

#### **POINT 1: ESTIMATED FORMATION TOPS**

(See No. 2 Below)

#### POINT 2: WATER, OIL, GAS AND/OR MINERAL BEARING FORMATIONS

Anticipated Formation Tops: KB 3198' (est)

GL 3185'

FORMATION	ESTIMATED TOP FROM KB	ESTIMATED SUBSEA TOP	BEARING
T/Salt	558'	+2640'	Barren
B/Salt	3233'	- 35'	Barren
T/Lamar	3456'	- 258'	Barren
T/Ramsey Sand	3496'	- 298'	Oil/Gas
T/Lwr Brushy Canyon U Sand	6948'	-3750'	Oil/Gas
T/Lwr Brushy Canyon Y Sand	7115'	<b>-3</b> 917'	Oil/Gas
T/Bone Spring Lime	7181'	-3983'	Barren
TD	7450'	-4252'	

#### POINT 3: CASING PROGRAM

TYPE	INTERVALS	PURPOSE	CONDITION
16"	0'- 40'	Conductor	New
8-5/8", 24#, WC-50, ST&C	0'- 500'	Surface	New
5-1/2°, 15.5#, K-55, LT&C	0' <b>-</b> 650 <b>0'</b>	Production	New
5-1/2", 17#, K-55, LT&C	6500' -7450'	Production	New

#### POINT 4: PRESSURE CONTROL EQUIPMENT (SEE ATTACHED DIAGRAM)

Bass Enterprises recognizes that the minimum BOP equipment is a double 3000 WP BOP equivalent to Diagram 1 of this package. However, the actual BOP's used will likely exceed the minimum requirements depending on the rig the operator employs. Bass Enterprises requests a waiver to the testing requirements per Onshore Order 2. This well is located in an area Bass is familiar with and we have chosen to set only a surface casing string of 500' and drill into the low permeability rock of the Bone Spring. 70% of the internal yield of 8-5/8", 24#, WC50 ST&C is 1,750 psi. The Delaware in this area is normally pressured (8.4 ppg MWE) and is not capable of flowing with a full column of fresh water. If for some reason the well does flow, we can not and will not shut the well in due to the low frac gradient at the shoe. The surface casing will only be used as a diverter. Therefore, a BOP test to indicate the BOP's are operating correctly and seal at lower pressures is all that is necessary. We intent to hydrotest the BOP stack, the choke and kill lines, Kelly cock, inside BOP, etc. to 200 psi (low) and 1,000 (high) with clear water using the rig pump. These tests will be performed:

- a) Upon installation
- b) After any component changes
- c) Fifteen days after a previous test
- d) As required by well conditions:

2

A function test to insure that the preventers are operating correctly will be performed on each trip.

#### **POINT 5: MUD PROGRAM**

DEPTH	MUD TYPE	WEIGHT.	_FV_	PV	YP	FL	Ph
0' - 500'	FW Spud Mud	8.5 - 9.2	45-35	NC	NC	NC	NC
500' - 5600'	Brine Water	9.8 -10.0	29-30	NÇ	NC	NC	10
5600' 7450'	**	8.9 - 9.3	36-40	15	10	<100 cc	9.5 - 10
** 35% dieseV65% l	brine emulsion						

<sup>\*</sup>Will increase vis for logging purposes only.

#### **POINT 6: TECHNICAL STAGES OF OPERATION**

#### A) TESTING

None anticipated.

#### B) LOGGING

GR-CNL-LDT-AIT from TD to 8-5/8" casing shoe. GR-CNL from base of 8-5/8" casing to surface.

#### C) CONVENTIONAL CORING

None anticipated.

#### D) CEMENT

INTERVAL SURFACE:	AMOUNT SXS_	FT OF	TYPE	GALS/SX	PPG	FT <sup>3</sup> /SX
Lead 0 - 230' (100% excess circ to surface)	65	200	Permian Basin Critical Zone + 1/4 pps Flocele	10.33	12.8	1.89
Tail 230-530' (100% excess circ to surface)	120	300	Prem Plus + 2% CaCl <sub>2</sub>	6.33	14.8	1.35
PRODUCTION: Sin 2996 - 7450' (+ 50	ngle stage w/ Zone Se	eal Cement	ı.			
Base Slurry	605	4454	Premium Plus + 1% Zone Seal	6.73	14.5	1.38

		1500	Base Slurry + 400 SCF/Nitrogen	6.32	8.9	2.01
		1952	Base Slurry + 225 SCF/Nitrogen	6.32	12.0	1.62

3

#### E) DIRECTIONAL DRILLING

No directional services anticipated.

#### **POINT 7: ANTICIPATED RESERVOIR CONDITIONS**

Normal pressures are anticipated throughout Delaware section. A BHP of 3136 psi (max) or MWE of 8.4 ppg is expected. Lost circulation may exist in the Delaware Section from 5600-7450'. No H<sub>2</sub>S is anticipated.

#### **POINT 8: OTHER PERTINENT INFORMATION**

A) Auxiliary Equipment

Upper and lower kelly cocks. Full opening stab in valve on the rig floor.

**BEPCO** 

B) Anticipated Starting Date

Upon approval

14 days drilling operations

10 days completion operations

SLA

August 22, 2001

#### MULTI-POINT SURFACE USE PLAN

#### NAME OF WELL: Poker Lake Unit #183

LEGAL DESCRIPTION - SURFACE: 330' FNL & 1980' FWL, Section 7, T-24-S, R-30-E, Eddy County, New Mexico.

#### **POINT 1: EXISTING ROADS**

A) Proposed Well Site Location:

See Exhibit A and Surveyor's Plat.

B) Existing Roads:

From junction of State Highway 128 and County Road 793, go south and west on County Road 4.5 miles to lease road. Turn west on lease road 0.5 miles to Poker Lake Unit well # 177. Will turn south on proposed lease and go 0.2 miles to location.

C) Existing Road Maintenance or Improvement Plan:

See Exhibit "A".

#### **POINT 2: NEW PLANNED ACCESS ROUTE**

A) Route Location:

See surveyor's plat. No additional road proposed.

B) Width

12' wide.

C) Maximum Grade

Not applicable.

D) Turnout Ditches

Spaced per BLM requirements.

E) Culverts, Cattle Guards, and Surfacing Equipment

None.

#### POINT 3: LOCATION OF EXISTING WELLS

Exhibit "A" indicates existing wells within the surrounding area.

#### POINT 4: LOCATION OF EXISTING OR PROPOSED FACILITIES

Page 2

A) Existing facilities within one mile owned or controlled by lessee/operator:

Production facilities located at PLU #153.

B) New Facilities in the Event of Production:

New facilities are proposed for the location PLU #181. A new flow line will be laid to those facilities.

C) Rehabilitation of Disturbed Areas Unnecessary for Production:

Following the construction of production facilities, those access areas required for continued production will be graded to provide drainage and minimize erosion. The areas unnecessary for use will be graded to blend in with the surrounding topography (see Point 10)

#### **POINT 5: LOCATION AND TYPE OF WATER SUPPLY**

A) Location and Type of Water Supply

Fresh water will be hauled from Diamond and Half Water Station 35 miles east of Carlsbad, New Mexico and other commercial facilities. Brine water will be hauled from Bass' Poker Lake Unit #153 or #140 batteries or commercial facilities.

B) Water Transportation System

Water hauling to the location will be over the existing and proposed roads.

#### POINT 6: SOURCE OF CONSTRUCTION MATERIALS

A) Materials

If not found on location, caliche will be hauled from the nearest BLM approved source.

B) Land Ownership

Federally Owned.

C) Materials Foreign to the Site

No construction materials foreign to this area are anticipated for this drill site.

D) Access Roads

See Exhibit "A".

#### POINT 7: METHODS FOR HANDLING WASTE MATERIAL

Page 3

#### A) Cuttings

Cuttings will be contained in the reserve pit.

#### B) Drilling Fluids

Drilling fluids will be contained in the reserve pit.

#### C) Produced Fluids

Water production will be contained in the reserve pit.

Hydrocarbon fluid or other fluids that may be produced during testing will be retained in test tanks. Prior to cleanup operations, any hydrocarbon material in the reserve pit will be removed by skimming or burning as the situation would dictate.

#### D) Sewage

Current laws and regulations pertaining to the disposal of human waste will be complied with.

#### E) Garbage

Portable containers will be utilized for garbage disposal during the drilling of this well.

#### F) Cleanup of Well Site

Upon release of the drilling rig, the surface of the drilling pad will be graded to accommodate a completion rig if electric log analysis indicate potential productive zones. The reserve pit will be fenced only in the event livestock is present and bird netted. The fence will be maintained until the pit is backfilled. Reasonable cleanup will be performed prior to the final restoration of the site.

#### **POINT 8: ANCILLARY FACILITIES**

None required.

#### **POINT 9: WELL SITE LAYOUT**

#### A) Rig Orientation and Layout

Exhibit "C" shows the dimensions of the well pad and reserve pits, and the location of major rig components. Only minor leveling of the well site will be required. No significant cuts or fills will be necessary.

#### POINT 9: WELL SITE LAYOUT - Cont'd ...

Page 4

B) Locations of Pits and Access Road

See Exhibits "A" and "C".

C) Lining of the Pits

The reserve pit will be lined with plastic.

#### POINT 10: PLANS FOR RESTORATION OF THE SURFACE

#### A) Reserve Pit Cleanup

The pits will be fenced immediately after construction only if livestock present and shall be maintained until they are backfilled. Previous to backfill operations, any hydrocarbon material on the pits' surfaces shall be removed. The fluids and solids contained in the pits shall be backfilled with soil excavated from the site and soil adjacent to the reserve pits. The restored surface of the pits shall be contoured to prevent impoundment of surface water flow. Water-bars will be constructed as needed to prevent excessive erosion. Topsoil, as available, shall be placed over the restored surface in a uniform layer. The area will be seeded according to the Bureau of Land Management stipulations during the appropriate season following restoration.

#### B) Restoration Plans - Production Developed

The reserve pits will be backfilled and restored as described above under Item A. In addition, those areas not required for production will be graded to blend with the surrounding topography. Topsoil, as available, will be placed upon those areas and seeded. The portion of the site required for production will be graded to minimize erosion and provide access during inclement conditions. Following depletion and abandonment of the site, restoration procedures will be those that follow under Item C.

#### C) Restoration Plans - No Production Developed

The reserve pits will be restored as described above. With no production developed, the entire surface disturbed by construction of the well site will be restored. The site will be contoured to blend with the surrounding topography and provide drainage of surface water. The topsoil, as available, shall be replaced in a uniform layer and seeded according to the Bureau of Land Management's stipulations.

#### D) Rehabilitation's Timetable

Upon completion of drilling operations, the initial cleanup of the site will be performed as soon as weather and site conditions allow economic execution of the work.

#### **POINT 11: OTHER INFORMATION**

Page 5

A) Terrain

Relatively flat.

B) Soil

Caliche and sand.

C) Vegetation

Sparse, primarily grasses and mesquite with very little grass.

D) Surface Use

Primarily grazing.

E) Surface Water

There are no ponds, lakes, streams or rivers within several miles of the wellsite.

F) Water Wells

There are no water wells within 1 mile of location.

G) Residences and Buildings

None in the immediate vicinity.

H) Historical Sites

None observed.

I) Archeological Resources

An archeological survey will be obtained for this area. Before any construction begins, a full and complete archeological survey will be submitted to the Bureau of Land Management. Any location or construction conflicts will be resolved before construction begins.

J) Surface Ownership

The well site and new access road is on federally owned land.

- K) Well signs will be posted at the drilling site.
- L) Open Pits

All pits containing liquid or mud will be fenced only if livestock is present and birdnetted.

#### POINT 12: OPERATOR'S FIELD REPRESENTATIVE

### THE FOLLOWING CONSTITUTE MINIMUM BLOWOUT PREVENTER REQUIREMENTS

- A. One double gate blowout preventer with lower rams for pipe and upper rams blind, all hydraulically controlled.
- B. Opening on preventers between rams to be flanged, studded or clamped and at least two inches in diameter.
- C. All connections from operating manifold to preventers to be all steel hose or tube a minimum of one inch in diameter.
- D. The available closing pressure shall be at least 15% in excess of that required with sufficient volume to operate (close, open, and re-close) the preventers.
- E. All connections to and from preventers to have a pressure rating equivalent to that of the BOP's.
- f. Manual controls to be installed before drilling cement plug.
- G. Valve to control flow through drill pipe to be located on rig floor.
- H. All chokes will be adjustable. Choke spool may be used between rams.

DIAGRAM 1
