CONFIGURATION

OPTION	AL
16 Flanged valve	1-13/16"

CONTRACTOR'S OPTION TO FURNISH:

- 1. All equipment and connections above bradenhead or casinghead. Working pressure of preveniers to be 3,000 psi, PERSONALITY.
- 2. Automatic accumulator (80 gallon, minimum) capable of closing SOP in 30 seconds or less and, holding them closed against full raied wartung pressure.
- 3.80P controls, to be located near drillers position.
- 4. Kelly equipped with Kelly stick.
- 5. inside blowout preventer or its equivalent on corrick floor at all times with proper threads to fit pipe being used.
- 6. Kelly saver-sub equipped with rubber casing protector at all times.
- 7. Plug type blowout prevenuer tester.
- S.Extra set pape rame to fit drill pape in use on location at all times.
- S. Type RX ring paskets in place of Type R.

MEC TO FURNISM:

- 1.Bradenhead or casinghead and side
- 2. Weer bushing, Il required.

GENERAL NOTES:

- 1. Deviations from this drawing may be made only with the express permission of MEC's Drilling Manager.
- 2.All connections, volves, Strings, piping, etc., subject to well or pump pressure must be Banged (suitable clemp connections acceptable) and have minimum wartung pressure equal to raied working pressure at preventers up through thore. Valves must be full opening and suitable for high pressure mud service.
- 3. Controls to be of standard design and each merical, showing opening and closing position.
- 4.Chouse will be positioned so as not to hamper or delay changing of chake beens. Replaceable parts for adjustable choice, other bean sizes, relainers, and chake wronches to be conveniently located for immediate use.
- 5.All valves to be equipped with handwhosis or handles ready for immediate
- 6. Chese lines must be suitably enchared.

- 7. He his wheels and extensions to be conmatted and ready for use
- 8. Verves adjacent to driffing apool to be kept spen. Use outside valves except for emisigency.
- B.Alt issumess steel control piping (2000 pai working pressure) to have Resible joins to avoid stress. Hosse will be Definition.
- 18.Cearigheed connections shall not be used except in case of emergency.
- 11.Do not use kill line for routine Rii-up **operations**

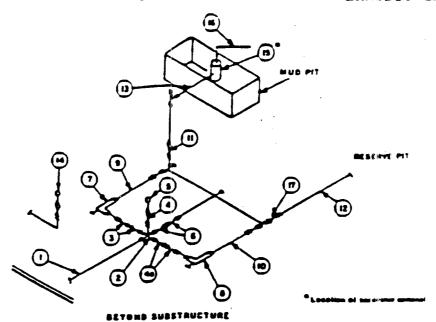

Attachment to Exhibit #1 NOTES REGARDING BLOWOUT PREVENTORS

Devon Energy Corporation (Nevada)
Hawk"3O" Federal #1
930' FSL & 2510' FEL
Section O-3-T18S-R27E
Eddy County, New Mexico

- 1. Drilling nipple will be constructed so it can be removed mechanically without the aid of a welder. The minimum internal diameter will equal BOP bore.
- 2. Wear ring will be properly installed in head.
- 3. Blowout preventor and all associated fittings will be in operable condition to withstand a minimum 3000 psi working pressure.
- 4. All fittings will be flanged.
- 5. A full bore safety valve tested to a minimum 3000 psi WP with proper pread connections will be available on the rotary rig floor at all times.
- 6. All choke lines will be anchored to prevent movement.
- 7. All BOP equipment will be equal to or larger in bore than the internal coameter of the last casing string.
- 8. Will maintain a kelly cock attached to the kelly.
- 9. Hand wheels and wrenches will be properly installed and tested for safe operation.
- 10. Hydraulic floor control for blowout preventor will be located as near in proximity to driller's controls as possible.
- 11. All BOP equipment will meet API standards and include a minimum 40 gallon accumulator having two independent means of power to initiate closing operation.

- (1) Day one required in Chas 34.
- (2) Goto volves-erry shall be used for Cines 10M.
- (2) Romaio aparested hydroxitic phase required on \$,000 pai and 10,000 pai for drilling.

EQUIPMENT SPECIFICATIONS AND INSTALLATION INSTRUCTIONS

- 1. All connections in choice manifold shall be welded, ittudded, flanged or Cameron clamp of comparable rating
- 2. All langes shall be API 68 or 68X and ring paskets shall be API RX or 8X. Use only 8X for 10 MWP.
- 3. All lines shall be securely enchared.
- 4. Choses shall be equipped with tungsten carbide sexts and needles, and replacements shall be evaliable.
- 5. Chose manifold pressure and standpipe pressure gauges shall be available at the choice manifold to assist in regulating Chances. As an alternate with automatic chances, a choice manifold presents gauge shall be included on the rig floor in conjunction with the standpipe pressure gauge.
- 6. Line from drilling speel to chake manifold anoutd be as straight as possible. Lines downstream from chokes shall make turns by large bands or 90° bands using bull plugged test.
- 7. Discharge lines from chokes, chake bypass and from top of goe separator should vent as fer as practical from the well
