Tom,

Reviewing the closure report for this site...

How come the below emails arnt in the report le notice of samples and JEPO approval.

Also please in the future if there are no lwater wells in the area please have your consultants still include the search documents so that I can confirm there aren't any..

Tom,

Samples look good, please complete a closure report per 19.15.29.12 NMAC.

Thanks,

Hobson/Jason/Cory,

Please find the updated site sketch and lab report for the flow path area along the road that was remediated and sampled yesterday. Remediation of this release is now complete. Enterprise will continue backfilling this area with native soil. If you have any questions, please call or email.

The labs look good; all below the OCD closure standard. Enterprise has EPO approval to back fill. Enterprise should request the amount of back fill clay soil needed from Jason Sandoval who can designate the place to get back fill soil.

Cory/Hobson/Jason,

Please find the attached updated sample location map, laboratory reports and siting criteria package. The remediation of the main excavation is now complete. We will begin backfilling the main excavation tomorrow with native Jicarilla soils. We still have to continue excavating in the area of sample P-2 and then resample. We will continue the excavating tomorrow. I anticipate we will be sampling tomorrow, March 27, 2019 at 2:00 p.m. If you have any questions, please all or email.

Sincerely,

Tom,

OCD concurs with Enterprises characterization. I was not able to find any GW data that showed otherwise.

OCD approval does not relieve Enterprise of any other requirements imposed by other regulator agencies.

Hobson/Cory,

Please find the attached site map, lab report and site ranking package for the Lateral 2C-29 excavation. Enterprise has ranked this release site to remediated to the NMOCD Tier II standard (10 ppm Benzene, 50 ppm BTEX, 2,500 ppm TPH (DRO+GRO = 1,00 ppm) and

10,000 ppm Chloride) of the New Spill Rule. Please review the attached documentation. Please acknowledge if you agree with the proposed remediation standard. We still have to excavate some more and resample on the base of the excavation and the flow path to meet this standard. We are scheduled to complete this on Monday, March 25, 2019. If you have any questions, please call or email.

Sincerely,

Subject: [EXT] Lateral 2C-29 - UL L Section 24 T25N R5W; 36.385225 -107.320180

Hobson/Cory,

This email is to follow up to our phone conversation and to notify you that Enterprise had a release of natural gas and condensate from the Lateral 2C-29 pipeline today. The release site is located at UL L Section 24 T25N R5W; 36.385225 -107.320180. An area of approximately 10 feet long by 10 feet wide, around the blow out hole was affected by the released fluids. Also, fluids ran down a bar ditch along the dirt road for about 120 feet. Enterprise has blown down, depressurized, and LOTO the pipeline. Enterprise has recovered the released fluids as much as practicable and barricaded off the affected areas. I will

keep you informed as to when the repairs and remediation are scheduled. If you have any questions, please call or email.

Sincerely,

Thomas J. Long
