TYPE OF SUBMISSION	TYPE OF ACTION			
☒ Notice of Intent	☐ Acidize	☐ Deepen	☐ Production (Start/Resume)	☐ Water Shut-Off
☐ Subsequent Report	☐ Alter Casing	☐ Fracture Treat	☐ Reclamation	☐ Well Integrity
☐ Final Abandonment Notice	☐ Casing Repair	☐ New Construction	☐ Recomplete	☒ Other
	☐ Change Plans	☐ Plug and Abandon	☐ Temporarily Abandon	Subsurface Commingling
	☐ Convert to Injection	☐ Plug Back	☐ Water Disposal	

13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

XTO Energy Inc. has filed a Notice of Intent to downhole commingle the Mesaverde and Dakota with the NMOCD. The NMOCD requires a copy of the Form C103 (attached) be sent to the BLM if there is a Federal mineral ownership in either spacing unit. Both spacing units (W/2 Sec 25) contain Federal mineral ownership. Copies of both Form C102 Well Location and Acreage Dedication Plats are also attached.

OTHER: DOWNHOLE COMMINGLE ☒		OTHER: ☐	

12. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work). SEE RULE 1103. For Multiple Completions: Attach wellbore diagram of proposed completion or recompilation.

XTO Energy Inc. requests an exception to Rule 303A to downhole commingle production from the Basin Dakota pool (71599) and the Blanco Mesaverde pool (72319). Both pools are included in Division Order R-11363 establishing pre-approved pool combinations for downhole commingling in the San Juan Basin. The APD for this well has been approved but the well has not been drilled. XTO requests approval to DHC prior to drilling so that both zones can be completed immediately after drilling is completed. Attachments 1 and 2 summarize the conditions and information required per Rules 303C(1) and 303C(3) (b). The proposed production allocations are based on the estimated ultimate gas and oil recoveries of the offset Dakota and Mesaverde completions in a 16 section area around this well location. See Attachments 3-7 for supporting data.

Proposed Gas Allocation: Dakota - 55.7% and Mesaverde - 44.3%
Proposed Oil Allocation: Dakota - 57.1% and Mesaverde - 42.9%
Proposed Water Allocation: Dakota - 57.1% and Mesaverde - 42.9%

I hereby certify that the information above is true and complete to the best of my knowledge and belief.

C-103 NOI Sundry to DHC
1/8/03**

Required conditions per Rule 303C(1):

- (a) The fluids from both pools are compatible. These pools have been commingled together in other wells without fluid compatibility, or formation damage problems and the two pools have been pre-approved for downhole commingling in the San Juan Basin.
- (b) No foreseeable secondary recovery operations are planned for these gas pools.
- (c) Using the NMOCD fracture parting pressure gradient of 0.65 psig per foot of depth, the bottomhole pressure to frac the Mesaverde (est. top 3,600') is 2,340 psig and to frac the Dakota (est. top 6,300') is 4,095 psig. Because of offset drainage neither zone's current bottom hole pressures (est. 1,200 psig -1,500 psig) are expected to exceed the frac parting pressure of either zone.
- (d) The well will be produced until both zones are pressure depleted and producing at uneconomic rates, thus no permanent loss of reserves will occur due to cross-flow in the wellbore.
- (e) Only the Mesaverde and Dakota will be open in the well. Other formations will be isolated from produced liquids by casing and cement.
- (f) XTO Energy, Inc will maintain the production below top allowable or other rate restriction set by the NMOCD for each pool.
- (g) Downhole commingling will not reduce the value of the total remaining production. Increased ultimate recovery is expected due to a lower economic production limit for each pool resulting lower operating cost per zone due to the combined production. Also, the reserves will be recovered in less time by downhole commingling.
- (h) Correlative rights will not be violated by downhole commingling these zones. The only open zones will be the Mesaverde and Dakota. The production will be allocated between the Mesaverde and Dakota per the allocation percentages on Attachment #2.

Attachment 2
Hare Gas Com C #1F
Sec 25K, T29W, R10W
API #30-045-31255
C-103 NOI Sundry to DHC
1/8/03

Additional information per Rule 303C(3)(b):

- (i) Division Order R-11363 established pre-approved pool combinations for downhole commingling.
- (ii) The pools to be commingled are:
Blanco Mesaverde Pool (72319)
Basin Dakota Pool (71599).
- (iii) Blanco Mesaverde perforations: 3,650' – 4,550' (est. perf interval)
Basin Dakota perforations: 6,250' – 6,750' (est. perf interval)
- (iv) The proposed gas and oil production allocation percentages are based on average estimated ultimate recovery per completion of the 64 Mesaverde and 52 Dakota completions in a 16 section area around the proposed well location. Water production will be allocated identical to the oil production allocation. See Attachments 3, 4, 5, 6 and 7 for the calculations and supporting data of the proposed production allocation percentages.

Proposed Allocation Percentages:

	GAS	OIL	WATER
Blanco Mesaverde	44.3%	42.9%	42.9%
Basin Dakota	55.7%	57.1%	57.1%

Blanco Mesaverde Pool (Ave. per well est. ultimate gas & oil recovery)

BO	MMCF
6,328	1,064

Basin Dakota Pool (Ave. per well est. ultimate gas & oil recovery)

BO	MMCF
8,423	1,339

- (v) Downhole commingling will not reduce the value of the total remaining production. Increased ultimate recovery is expected due to a lower economic production limit for each pool resulting lower operating cost per zone due to the combined production. Also, the reserves will be recovered in less time by downhole commingling.
- (vi) Working and royalty interest ownership in the Dakota and Mesaverde spacing units in this well are not identical. XTO energy Inc. notified the owners of our plans to downhole commingle the Dakota and Mesaverde by certified mail (return receipt) on 12/4/02. The BLM signed a waiver of objection in lieu of 20-day notification. No objections were received within the 20-day protest period. Attachment 8 is a list of the owners notified.
- (vii) The Dakota and Mesaverde spacing units (W/2, Sec 25) do not contain State lands or minerals, but do contain Federal minerals. Thus, a copy of the Form C-103 with attachments was sent to the BLM using sundry notice form 3160-5.
