Re: Administrative Approval to Surface Commingle
LC Kelly #1 and LC Kelly #11
Section 5, T30N, R12W
San Juan County, New Mexico

Dear Ms. Wrotenbery,

XTO Energy Inc requests administrative approval to surface commingle the referenced wells. Surface commingling will allow the use of a single compressor to produce both wells. Oil production will not be commingled.

The gas line pressures in this area are low recoveries. The installation of a single well to minimize surface use impact, extend the life of the LC Kelly #1 and LC Kelly #11 will be in the permitting process and has not been completed.

minimize
uses,
recoveries.
Kelly #11 is in
its year.

The following is enclosed for your review:

1. Well Information Table
2. Gas Allocation Method
3. Well Location Map
4. Battery schematic of proposed wells

Scan
#11
only

The LC Kelly #1 and LC Kelly #11 are low gas
interest. If you need additional information,
contact me at (505)-324-1090.

Sincerely,

Thomas DeLong
Operations Engineer

CC: NMOCD - District III (Aztec)

LC Kelly #1 and LC Kelly #11
Well Information

	LC Kelly #1	LC Kelly #11
Location	M, Sec 5, T30N, R12W	M, Sec 5, T30N, R12W
Formation	Dakota	Fruitland Coal & Pictured Cliffs
API#	30-045-09815	30-045-31114
Pool Name	Basin Dakota	Basin Fruitland Coal & Aztec Pictured Cliffs
Pool Code	71599	71629 (FC) 71280 (PC)
Gas Gravity	0.686	0.580 (estimated)
Gas Rate (MCFPD)	53	NA
Oil Gravity	51.2	NA
Oil Rate (BPD)	0.7	NA
Water Rate (BPD)	<0.1	NA

LC Kelly #1 and LC Kelly #11

Allocation Method

The EPNG meter #73858 will be the sales meter (CDP) for the LC Kelly #1 and the LC Kelly #11 gas sales. An allocation meter will be set between the LC Kelly #1 separator and the suction side of the compressor. This meter will only measure gas flow from the LC Kelly #1.

LC Kelly #1 gas production will be calculated as follows:

(LC Kelly #1 allocation meter volume) + (LC Kelly #1 separator fuel gas & pumping unit fuel gas)

LC Kelly #11 gas production will be calculated as follows:

(EPNG meter #73858 volume) – (LC Kelly #1 allocation meter volume) + (compressor fuel gas) + (LC Kelly #11 separator fuel gas & pumping unit fuel gas)

Compressor fuel gas usage will be allocated to each well based on the percentage of gas compressed for each well. For example the LC Kelly #1 percentage of compressor fuel usage would be calculated as follows:

$$\frac{(\text{LC Kelly \#1 allocation meter volume})}{(\text{EPNG meter \#73858 volume}) + (\text{compressor fuel gas})}$$

Compressor fuel gas will be obtained using the operating conditions of the compressor and manufactures published fuel gas volumes or calculated volumes using the results of actual measurements of fuel gas usage.

LC Kelly #1 gas sales will be calculated as follows:

(LC Kelly #1 allocation meter volume) – (LC Kelly #1 allocated compressor fuel gas)

LC Kelly #11 gas sales will be calculated as follows:

(EPNG meter #73858 volume) – (LC Kelly #1 gas sales)

No commingling of liquid hydrocarbon will occur. Production and sales will be based on actual measured volumes from each well. LC Kelly #11 should not produce liquid hydrocarbon.

The LC Kelly #1 has averaged under 0.1 BWPD over the last year. This is considered to be insignificant and it would be poor economics to set an additional water tank for the LC Kelly #11. All water production will be allocated to the LC Kelly #11. Interests are common in the LC Kelly #1 and #11.

Surface commingling will allow the installation of one compressor to serve both wells and will not decrease the value of the gas. It will allow the gas to be compressed at a lower cost than two compressors and will extend the economic life of the wells. Due to high line pressures in this area, compression is required to effectively produce the wells.
