of starting any proposed work). SEE RULE 1103. For Multiple Completions: Attach wellbore diagram of proposed completion or recompilation.				
On 02/06/2003, BP America Production Company submitted an application for permit to drill and complete the subject well into the Basin				
Dakota, produce the well in order to establish a production rate, isolate the zone, then add the Blanco Mesaverde and commingle				
production Downhole. BP now seeks NMOCD approval to Downhole commingle production in the subject well as per procedure on				
reverse side of this Form. Well is scheduled to be drilled in the 2 nd QTR of 2003.				
The Basin Dakota (71599) & the Blanco Mesaverde (72319) Pools are Pre-Approved for Downhole Commingling per NMOCD Order R -				
11363. The working and overriding royalty interest owners in the proposed commingled pools are identical, therefore no further				
notification of this application is required.				
Production is proposed to be allocated based on a fixed percentage. We will perform a deliverability test on the Dakota, isolate the zone and complete into the Mesaverde. The deliverability test will be performed on the combined zones and Dakota rate will be subtracted from				
the total well stream to establish the		a on the combined :	zones and Dakota ra	ite will be subtracted from
Commingling Production Downhole in the subject well from the proposed pools with not reduce the value of the total remaining				
production. $0.66.163A^2$				
I hereby certify that the information above is true and complete to the best of my knowledge and belief.

Elliott Gas Com 1R Downhole Commingling Procedure

- 1. Run TDT log
- 2. Perforate Dakota
- 3. Run Gauges to Dakota, leave overnight
- 4. Retrieve Gauges and frac the Dakota (Slick Water)
- 5. Clean out frac & flow back to stabilize production
- 6. Run 2 3/8" tubing and perform 12 hour stabilized test on Dakota
- 7. Set Bridge plug Between Mesaverde and Dakota
- 8. Perforate and frac (2 Stage N2 Foam) the Mesaverde Formation
- 9. Clean out frac and wellbore to PBTD
- 10. Run Completion String and RDSU
- 11. Put well on Line
- 12. Perform well test on the Combined Measverde/Dakota production stream
