To address BLM concerns about weathered oil stained dirt within the normally dry tank drain pit, approximately 10 cubic yards of oil stained dirt will be removed and land farmed on location. The land farmed soil will be contoured to minimize water run-off, nutrients added and periodically disc'd. A ±40 bbl fiberglass tank will be placed in the tank drain pit depression for receiving any fluids drained from the production tank in the future. The tank will be placed upon a base designed for leak detection and the sides left open. The pit will be formally closed at the time of well abandonment. This well is outside the established vulnerable area boundary. A plat of the location and 2 earthen pits is attached.

I hereby certify that the information above is true and complete to the best of my knowledge and belief. I further certify that any pit or below-grade tank has been/will be constructed or closed according to NMOC guidelines ☒, a general permit ☐ or an (attached) alternative OCD-approved plan ☐.
