OTHER: ☐

13. Describe proposed or completed operations. (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work). SEE RULE 1103. For Multiple Completions: Attach wellbore diagram of proposed completion or recompletion.

CDX RIO, LLC request approval to down-hole commingle the subject well. CDX plans to down-hole commingle the Basin Dakota (71599) and the Blanco Mesaverde (72319) pools in this wellbore. These are pre-approved pools as per NMOCD Order#11363.

The Mesaverde will be perforated 5180 - 5420 & 4775 - 4925, Frac stimulated and tested. Production allocation for the two pools will be determined by the subtraction method.

The commingling of the Basin Dakota and Blanco Mesa Verde pools in this wellbore will not reduce the value of the remaining production. Commingling these pools should increase the value of the remaining reserves due to the using the combined reservoir energy to produce the well. Commingling operations conducted on other similar wells have resulted in increased production rates and greater reserves that producing the zones separately.

The working, overriding, and royalty interest owners in the two pools affected by this commingle are identical, therefore no notification of this application need be submitted via certified mail (return receipt).

A copy of this application has been forwarded to the Bureau of Land Management.

I hereby certify that the information above is true and complete to the best of my knowledge and belief. I further certify that any pit or below-grade tank has been/will be constructed or closed according to NMOCD guidelines ☐, a general permit ☐ or an (attached) alternative OCD-approved plan ☐.

Operator TENNECO OIL COMPANY			Lease JICARILLA "C"		Well No. 4-E
Unit Letter M	Section 24	Township 26N	Range 5W	County Rio Arriba	
Actual Footage Location of Well:					
790 feet from the South line and		990 feet from the West line			
Ground Level Elev. 6578	Producing Formation Dakota	Pool Basin Dakota		Dedicated Acreage: W 320 Acres	

1. Outline the acreage dedicated to the subject well by colored pencil or hachure marks on the plat below.
2. If more than one lease is dedicated to the well, outline each and identify the ownership thereof (both as to working interest and royalty).
3. If more than one lease of different ownership is dedicated to the well, have the interests of all owners been consolidated by communitization, unitization, force-pooling, etc?

☐ Yes ☐ No If answer is "yes," type of consolidation _____

If answer is "no," list the owners and tract descriptions which have actually been consolidated. (Use reverse side of this form if necessary.) _____

No allowable will be assigned to the well until all interests have been consolidated (by communitization, unitization, forced-pooling, or otherwise) or until a non-standard unit, eliminating such interests, has been approved by the Commission.

13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

Proposed operation – to start approximately September 30th

1. Run bit and casing scraper to PBTD.
2. Run GR/CBL log across Mesaverde.
3. Cement squeeze as necessary (notify the BLM before any cementing operations)
4. Set 4 1/2" CIBP at 5550' (100' below lowest MV perf).
5. Pressure test casing to 3,000 psi. If pressure holds, frac down casing, else, repair leak and frac down tubing.
6. Fracture stimulate Point Lookout and Lower Menefee (5180-5420, 25 shots).
7. Flowback frac and allow well to log off. Release packer, POOH.
8. Set 4 1/2" BP at 5000'.
9. Fracture stimulate Cliffhouse and Upper Menefee (4775-4925, 25 shots).
10. Flowback frac and allow well to log off. Release packer POOH.
11. Drill out bridge plugs.
12. Cleanout and test Mesaverde and Dakota for allocation purposes.
13. Run tubing and place on production as a Blanco Mesaverde and Basin Dakota producer.

14. I hereby certify that the foregoing is true and correct Name (Printed/Typed) David C. Smith		Title Production Engineer
