Richardson Operating Company WF Federal 20-3 Downhole Commingling Application

The WF Federal 20-3 is a producing Twin Mounds Pictured Cliffs well completed in February, 2001. As part of Richardson's development program in their WF (West Farmington) field, this well has been perforated and stimulated in the Basin Fruitland Coal.

Pursuant to NMOCD Order R-11363, Richardson Operating Company seeks approval to down-hole commingle the "Pre-approved pools and areas": Twin Mounds Fruitland Sand PC (86620) and Basin Fruitland Coal (79680) pools in this well.

Based on Richardson Operating wells in this township: both zones have similar bottom hole pressures of approximately 200 psi., both zones produce gas with formation water and no liquid hydrocarbons, and fluids from the two zones are compatible.

Richardson Operating proposes to allocate production based on the initial (base) production rate and matched hyperbolic decline production history from the Pictured Cliffs. Production allocation attributable to the Fruitland Coal Formation will be based on the difference in the production forecast for the Pictured Cliffs and the commingled gas stream of both intervals.

The monthly production from the Pictured Cliffs (q_t) will be calculated from the hyperbolic decline Formula:

$$q_t = \frac{q_i}{(1+b(D)t)^{1/b}}$$

Where: q_i = base rate of 2088 mcfpm

h = 4

t = time produced in years

D = 49.4%

Fruitland Coal Production = Total Production for month - Pictured Cliffs production for month

WF Federal 20-3

PC Gas Production History

The well was perforated and stimulated in the Pictured Cliffs. The well was allowed to flow back immediately after stimulation. The well was then cleaned up and produced for 924 days. The first 64 days of production was 4396 mscf or 68.7/day or avg 30.4 day month = 2088 mcf (base rate). The 924 day production decline fit a hyperbolic decline cure with a "b" = .4 and D = 49.4%. Richardson Operating proposes to use these constants to determine future production from the Pictured Cliffs on this well.

The production history, production forecast and matched production curves are attached for your review.

The Twin Mounds Fruitland Sand PC is perforated: 1098' – 1106'. The Basin Fruitland Coal is perforated: 982' – 988', 1027' and 1086' – 1095'.

The down-hole commingling will not reduce the value of the total remaining production of this well.

Ownership between the two pools is not identical.

Richardson Operating Company has sent notice to all interest owners in the spacing units by certified mail (return receipt) of their intent to apply for down-hole commingling. No objection was received within 20 days of sending the notice.

A copy of this application has been submitted via Sundry Notice Form 3160-5 to the Bureau of Land Management.

Your consideration and approval of this application is appreciated.

Richardson Operating Company WF Federal 20-3
