The elevation of the derrick floor above sea level is 6993 ft. (G.L.)

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate muddling jobs, cementing points, and all other important proposed work)

Well was drilled to a total depth of 1420 feet with rotary tools. As previously reported drill stem tests and surveys were made of the Pictured Cliffs formation but no commercial production was found. It is proposed to permanently plug and abandon this well as follows: (1) Plug hole with solid cement from bottom to 1080 feet (25 feet above Pictured Cliffs formation); (2) Fill hole with 12 pound mud up to bottom of 9-5/8" casing (479 feet); (3) Run 15 sack solid cement plug in the bottom of 9-5/8" casing; (4) Fill hole with 12 pound mud and place a 10 sack solid cement plug in top of 9-5/8" casing; (5) Erect 4' pipe marker and restore ground level to original contours as per regulations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
