DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Total Depth 1659' Shale. 8-5/8" surface casing set at 337' and cemented to the surface. This well was drilled to test the Pictured Cliffs formation, which was encountered from 1360' to 1510'. Formation samples and a D.S.T. indicated that this zone was not productive. No commercial gas, oil, or water zones were encountered. We, therefore, desire to plug and abandon this well as follows:

Hole will be filled with heavy mud and three cement plugs spotted- 70 sack plug 1530' to 1290'; 20 sack plug 370' to 305'; and 20 sack plug 65' to the surface with a 4" pipe marker cemented at the surface. All mud and cement plugs will be pumped in thru drill pipe.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
